Art Unit: 2182

Election/Restrictions

1. Newly submitted claim 25 is directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

Claims 1, 3, 7-11, 14-15, 17-19, drawn to a text-entry system, classified in class 341, subclass 28. Claim 16, drawn to a method for constructing trigger sequences for a text-entry system, classified in class 341, subclass 28. Claim 25, drawn to a text-entry system, classified in class 341, subclass 28.

Claims 1, 3, 7-11, 14-15, 17-19 are directed to a subcombination of a text-entry system (Invention I) that includes printable symbols comprising pre-conversion symbols, post-conversion symbols and non-conversion symbols; a display to display the printable symbols; a first mechanism to display the printable symbols; a second mechanism to recognize, upon input of a symbol-input-end symbol, elements of a set of trigger sequences of keystrokes and thereby trigger conversion of a pre-conversion symbol or a pre-conversion sequence displayed on the display to a post-conversion sequence comprising a post-conversion symbol – among others.

Claim 16 is directed to a method for constructing trigger sequences for a textentry system (Invention II) that includes selecting a set of printable symbols from a set consisting of pre-conversion symbols, post-conversion symbols, and non-conversion symbols; selecting a set of sample text sequences; for each member of said set of selected sample text sequences, determining a corresponding keystroke sequence which causes said text-entry system to enter a selected sample text sequence, said corresponding keystroke characterized in that it does not contain a keystroke on a Art Unit: 2182

conversion key, said conversion key characterized as converting a subset of displayed pre-conversion symbols to a post-conversion symbol, without additionally causing display of further printable symbols where said further printable symbols are selected from the set consisting of pre-conversion symbols and non-conversion symbols – among others.

Claim 25 is directed to a subcombination of a text-entry system (Invention III) that includes pre-conversion symbols, post-conversion symbols, and symbol-input-end symbols; a display to display printable ones of the symbols; a first mechanism to display the pre-conversion symbols; a second mechanism to recognize trigger sequences and thereby trigger conversion of a plurality of pre-conversion symbols displayed by the first mechanism to a plurality of post-conversion symbols, where said second keystroke is on a key having a pre-conversion symbol assigned to it, also immediately causing display of a pre-conversion symbol assigned to said key for later possible input and inclusion in a subsequent sequence of pre-conversion symbols – among others.

2. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope, are not obvious variants, and if it is shown that at least one subcombination is separately usable. See MPEP § 806.05(d)

In the instant case, the subcombination of invention I has separate utility such as a text-entry system that includes printable symbols comprising pre-conversion symbols, post-conversion symbols and non-conversion symbols; a display to display the printable symbols; a first mechanism to display the printable symbols; a second mechanism to

Art Unit: 2182

recognize, upon input of a symbol-input-end symbol, elements of a set of trigger sequences of keystrokes and thereby trigger conversion of a pre-conversion symbol or a pre-conversion sequence displayed on the display to a post-conversion sequence comprising a post-conversion symbol – among others.

In addition, the subcombination of Invention III has separate utility such as a textentry system that includes pre-conversion symbols, post-conversion symbols, and
symbol-input-end symbols; a display to display printable ones of the symbols; a first
mechanism to display the pre-conversion symbols; a second mechanism to recognize
trigger sequences and thereby trigger conversion of a plurality of pre-conversion
symbols displayed by the first mechanism to a plurality of post-conversion symbols,
where said second keystroke is on a key having a pre-conversion symbol assigned to it,
also immediately causing display of a pre-conversion symbol assigned to said key for
later possible input and inclusion in a subsequent sequence of pre-conversion symbols
– among others.

Where election of a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Application/Control Number: 10/605,157

Art Unit: 2182

3. Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case the text-entry system of Invention III can be used to practice a method that is materially different from the method of Invention II, i.e. a method that does not require selecting a set of printable symbols from a set consisting of preconversion symbols, post-conversion symbols, and non-conversion symbols; selecting a set of sample text sequences; for each member of said set of selected sample text sequences, determining a corresponding keystroke sequence which causes said textentry system to enter a selected sample text sequence, said corresponding keystroke characterized in that it does not contain a keystroke on a conversion key, said conversion key characterized as converting a subset of displayed pre-conversion symbols to a post-conversion symbol, without additionally causing display of further printable symbols where said further printable symbols are selected from the set consisting of pre-conversion symbols and non-conversion symbols – among others.

4. Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim 25 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Application/Control Number: 10/605,157

Art Unit: 2182

5. Restriction to one of the inventions I and II is also required under 35 U.S.C. 121, because Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)).

In this case In this case the text-entry system of Invention I can be used to practice a method that is materially different from the method of Invention II, i.e. a method that does not require selecting a set of printable symbols from a set consisting of pre-conversion symbols, post-conversion symbols, and non-conversion symbols; selecting a set of sample text sequences; for each member of said set of selected sample text sequences, determining a corresponding keystroke sequence which causes said text-entry system to enter a selected sample text sequence, said corresponding keystroke characterized in that it does not contain a keystroke on a conversion key, said conversion key characterized as converting a subset of displayed pre-conversion symbols to a post-conversion symbol, without additionally causing display of further printable symbols where said further printable symbols are selected from the set consisting of pre-conversion symbols and non-conversion symbols — among others.

6. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above

and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement must include (i) an election of a invention to be examined to be complete (i.e. election of Invention I – claims 1, 3, 7-11, 14-15, 17-19; or Invention II – claim 16) even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time

Art Unit: 2182

of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Examiner Notes: In the interview dated March 18, 2008, applicant indicates that applicant intends to claim the trigger sequence illustrated in FIG. 13 of applicant's disclosure. The invention however was not previously claimed in a way which particularly points out and distinctively defines the metes and bounds of the subject matter illustrated by FIG. 13 of applicant's disclosure.

The examiner therefore strongly suggests that applicant maps each limitation of the elected independent claim to specific teachings in the disclosure (preferably by column, line numbers and/or labels and drawings of US publication 2005/0060448 – by Gutowitz) to avoid unnecessary 112 rejections, help the examiner determine the scope of the claims and further the prosecution. The examiner notes that when an applicant maps out the limitations of a claim, 112 rejections are less likely. Note that the USPTO is justified in requiring the applicant to more precisely define the metes and bounds of the claimed invention by holding the claim unpatentable under 35 USC 112, second paragraph, as indefinite - if a claim is amenable to two or more plausible claim constructions.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to TANH Q. NGUYEN whose telephone number is

(571)272-4154. The examiner can normally be reached on M-F (9:30AM-6:00PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, TARIQ HAFIZ can be reached on (571)272-6729. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
